

## Prime ReCycle™ PCR PET

Our Prime ReCycle PCR PET is manufactured using prime virgin resin with post-consumer recycled content materials. The post-consumer recycled content comes from products that have reached the end of their life and have been recovered or diverted from the waste stream.

**Primex** continues to lead with environmentally friendly practices and engineered products that focus on the principles of the 4R's - REDUCE, REUSE, RECYCLE and REPLACE.

### Customization

Prime ReCycle PCR PET is designed to help support broader recycling efforts and thereby lessen the amount of plastic in landfills or the natural environment. This gives customers a more sustainable product option. Prime ReCycle PCR PET is available in various percentages of recycled content (20%, 50%, or 100%). Also available in clear, white, and colors.\* Various gauges are available, ranging in rolls from .012 to .035.

### Sustainability

Sustainability includes considering the product's circularity or end of life during the design of the finished product. Prime ReCycle PCR PET is a polyester (recycle code 1) that can be recycled as a post-industrial or post-consumer product. Contact your Primex Territory Business Manager or check with local recycling facilities to determine where it is collected and recycled.

**Primex Sustainability: A better tomorrow, starting today!**

\*Due to the nature of raw materials being used, opacity and/or surface aesthetics may vary from lot to lot.
