

Prime ReCycle™ PCR Polypropylene

Our Prime ReCycle PCR Polypropylene is manufactured using prime virgin resin with 25% Post-Consumer Recycled content. The post-consumer recycled content comes from products that have reached the end of their life and have been recovered or diverted from the waste stream.

Primex continues to lead with environmentally friendly practices and engineered products that focus on the principles of the 4R's - REDUCE, REUSE, RECYCLE and REPLACE.

Customization

Prime ReCycle PCR PP is designed to help support broader recycling efforts and thereby lessen the amount of plastic in landfills or the natural environment. This gives customers a more sustainable product option. Prime ReCycle PCR PP is available in white, black, and colors in sheets & rolls.* It can be thermoformed, die cut, and printed. A variety of gauges are available, ranging from .018 to .250.

Sustainability

Sustainability includes considering the product's circularity or end of life during the design of the finished product. Prime ReCycle PCR PP is a polypropylene (recycle code 5) that can be recycled as a post-industrial or post-consumer product. Contact your Primex Territory Business Manager or check with local recycling facilities to determine where it is collected and recycled.

Primex Sustainability: A better tomorrow, starting today!

*Due to the nature of raw materials being used, colors, opacity, and/or surface aesthetics may vary from lot to lot. Colors may be limited.
