

Prime ReCycled™ Materials

Prime ReCycled Materials are available in a variety of polymers; Polystyrene, ABS, Polyethylene, Polypropylene and many more.

Primex continues to lead with environmentally friendly practices and engineered products that focus on the principles of the 4R's - REDUCE, REUSE, RECYCLE and REPLACE.

Customization

Prime ReCycled Materials were designed for the customer that desires Post-Industrial Recycled Content Materials. This product designation helps clarify the product description that in the past was referred to as Utility Grade Products. For many years, Primex Plastics has provided our customers with several recycled content material options in many colors with a sustainability/environmental focus. Our goal is to continue to provide to the marketplace material options that support our sustainability focus.

Sustainability

Prime ReCycled meets industry sustainability standards and can be recycled as a post-industrial or post-consumer product.

Primex Sustainability: A better tomorrow, starting today!
