

Primex Sustainable Product Line

Primex continues to lead with environmentally friendly practices and engineered products that focus on the principles of the 4R's - REDUCE, REUSE, RECYCLE, and REPLACE.

Prime ReCycle PCR is designed to help support broader recycling efforts and thereby lessen the amount of plastic in landfills or the natural environment. This gives Primex customers a more sustainable product option.

Prime ReCycle™ PCR PET

A strong, lightweight clear PET extruded material with 50% Post-Consumer Recycled content. This material is suitable for a wide range of packaging applications.

Prime ReCycle™ PCR PS

PCR is designed to help support broader recycling efforts and thereby lessen the amount of plastic in landfills or the natural environment. This gives Primex customers more sustainable product options.

Prime ReCycle™ PCR PP

Polypropylene with 25% Post-Consumer Recycled content that is a lightweight material with tough, moisture barrier, and formability characteristics - excellent material for packaging, consumer, and industrial applications.

Prime ReCycle™ PCR HDPE

High-Density Polyethylene with 25% Post-Consumer Recycled content provides good chemical and weathering resistance, making it ideal for interior and exterior applications.

Prime ReCycle™ PCR Cor-X PP

Corrugated Polypropylene with 15% or 30% Post-Consumer Recycled content is perfect for point-of-purchase displays, totes, signs, dunnage, and other types of containers.

Primex Sustainable Product Line - Page 2

The Primex family of companies achieves a sustainable business by using energy-efficient technologies, expanding recycling efforts, reducing waste, improving operational efficiencies, and engineering sustainable products that honor our commitment as environmental stewards, protecting our natural resources for our customers, employees, and future generations.

Absolve®

A modified material developed with advanced technology that facilitates degradation* in a microorganism-enriched environment. Absolve is available in various polymers; Polystyrene, Polypropylene, Polyethylene, and Corrugated Plastics.

Prime BioGreen®

BioGreen is an unique custom extruded product that is manufactured from bio-based and renewable raw materials.

BioGraph.ics®

BioGraph.ics is an exclusive custom extruded product that is manufactured from bio-based materials utilizing renewable energy. This unique formulation is used as a substitute to traditional petroleum-based plastics resins.

Prime ReCycle™ Materials

Prime ReCycle Materials are produced with post-industrial recycled materials from two durable waste streams. Materials are sourced through recycling efforts of both internal manufacturing processes and external customers' processes. Available in various polymers; Polyethylene, Polypropylene, Polystyrene, and many more.

Prime ReCycle™ Plus

Our Prime ReCycle Plus is produced with our internal recycled materials. This recycled content material is ideal for point-of-purchase displays, printed signage, packaging, and other types of containers. Currently available in Polypropylene and Polystyrene.

Primex Sustainability: A better tomorrow, starting today!
